

Final Reflection

Overall, this solution is pretty nice for me to learn and can apply in the real live. This technic is very new with me, and take time to learn. Finally, I can do it.

In the next time, I think I will learn more about AI, how to build model in localhost, more framework about AI.

Azure Availabilty

It not warning about limit access to Face API for personal account and take time to submit. I think many students will late for the deadline like me. I done every thing but waiting the approve and comeback to finish the project. It shoule be mention from the begin of section.

Document

When practice, I was frustrated in find the search and create it. I follow course and can not find the service by name. like Form Regconizer, Azure Cognitive servie. I must search with keywork like "Form Regconizer changed name?" then it shows me a new name. I think at least the course should be mention about this change if not update the video.

Support

Mentor of this course is late to response and the response have no value for me.
